

Abstract of the Disclosure

A pharmaceutical composition comprising fexofenadine or a pharmaceutical acceptable salt thereof, about 10 wt. % to about 70 wt. % of lactose, and about 1 wt. % to about 40 wt. % of a low-substituted hydroxypropyl cellulose, wherein the weight percents are based on the total weight of the pharmaceutical composition. The fexofenadine compositions of the invention exhibit improved bioavailability as expressed as C_{\max} , the maximum amount of active ingredient found in the plasma, or as AUC, the area under the plasma concentration time curve.
